

## Precipitated chalk Vinfoerm Desacid

**Product and Description:**

Precipitated chalk (pure calcium carbonate, E170), for the deacidification of must and wine. White fine powder, neutral in odour, low solubility in water, CO<sub>2</sub>-formation with acid addition. Observe regulations and deacidification directives when applying the product. Permitted according to laws and regulations presently valid.

**Aim of treatment:**

Reduction of tartaric acid in must/grape juice, young wine and wine.

**Dosage and application:**

Mix this product with some water, and then add it slowly to the vessel under constant stirring. The resulting formation of CO<sub>2</sub> is vigorous, this means deacidification vessels must provide sufficient room. To precipitate 1 ‰ or 1 g/L tartaric acid, 67 g Desacid is required per 100 L of beverage to be treated.

In case of extensive deacidification, unfavourable tartaric acid/malic acid ratios and generally in case of low tartaric acid proportions, a double-salt deacidification or an extended double-salt deacidification becomes necessary.

**Analysis:**

CaCO <sub>3</sub>	> 98,5 %
Mg	< 0,1 %
Na	< 0,15 %
Fe	< 5 ppm
As	< 1 ppm

**Storage:**

Protect from influences of odour and moisture. Reseal opened packagings immediately and tightly
